Professional Experience

Web Consultant - Freelance

Kuhl Shop - kuhlshop.com

San Diego, CA
May '23 - Present

- Collaborated with 25+ Online brands to improve their online websites.
- Developed and maintained client websites, using Shopify for e-commerce functionality and Webflow for creating custom, flexible landing pages and site architecture.
- Designed a "Quick Shop" catalog to allow shoppers to buy multiple products on 1 page.
- Built a VueJS + TS Full-Stack Shopify App to streamline brands' online wholesale portals. Streamlining invoicing, self-service ordering and managing price lists across customers.

Senior Software Engineer

Podium Nutrition LLC - 321podium.com

Remote
July '22 - Aug '25

- Architected and maintained two E-Commerce Shopify stores.
- Designed and engineered a Full-Stack VueJS & TS internal customer loyalty program, along with a subscriptions platform for recurring orders, an AI-powered receipt scanner, a referral program, and additional features.
- Designed and executed pixel perfect landing pages to maximize conversion rate.
- Assisted with any tech-related customer support tickets.

Software Engineer

Flowmatic - flowmatic.xyz

Remote
Sept '21 - June '22

- Led the front-end development of an on-chain Solana trading application.
- Built in React, and later migrated to Vue. Doubling the productivity of our team.
- Implemented a custom data granularity algorithm and g-zip compression for historical market data and all client-server requests to reduce bandwidth usage by 80%.

Community Contributions

Community Organizer

DEVx Network - devx.network

San Diego, CA
Dec. '23 - Present

- Co-Founded and hosts a local San Diego meetup for software engineers.
- Helped grow from 5 average attendees to 50. Check us out!

Open Source Projects

Open Source Developer - Viper Charts

<https://github.com/ViperCharts/viper-charts-js>

Aug. '21 - Nov. '22

An open-source React.js library for plotting and comparing real-time asset data

- Solely founded / built the project to provide an OSS alternative to TradingView.
- Wrote a CPU rendering engine in JS to transform price data to Canvas instructions.
- Implemented a custom WebWorker message broker to offload CPU intensive operations like chart instruction recalculations to alternative CPU cores, massively improving the responsibility of the UI and preventing the hanging of the main thread.
